

# Certified Splunk ES Analyst

# Table of Contents

**Module 1**      **Introduction to Splunk and its Products**

**Module 2**      **Splunk Deployment Practical Lab**

**Module 3**      **Introduction to Splunk's User Interface**

**Module 4**      **Introduction to Splunk Basic Configurations**

**Module 5**      **Introduction to Splunk Indexes**

**Module 6**      **Basic Searching in Splunk**

**Module 7**      **Using Fields in Searches**

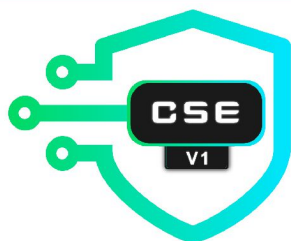

**Module 8**      **Saving and Scheduling Searches**

**Module 9**      **Creating Scheduled Reports and Alerts**

**Module 10**      **Tags and Event Types**

**Module 11**      **Creating and Using Macros**

**Module 12**      **Workflow**

**Module 13**

**Splunk Search Commands**

**Module 14**

**Using Basic Transforming Commands**

**Module 15**

**Correlating Events**

**Module 16**

**Creating Reports and Dashboards**

**Module 17**

**Datasets and the Common Information Model**

**Module 18**

**Creating and Using Lookups**

**Module 19**

**Using Pivot**

**Module 20**

**Getting started with Splunk Enterprise Security**

**Module 21**

**Investigation and Monitoring**

**Module 22**

**Investigations**

**Module 23**

**Risk and Network Analysis**

**Module 24**

**Web Intelligence**

**Module 25**

**User Intelligence**

**Module 26**

**Threat Intelligence**

## **Module 1**

### **Introduction to Splunk and its Products**

- Introduction to Splunk Enterprise
- Introduction to Splunk Enterprise Security
- The main use of Splunk Enterprise and Splunk Enterprise Security
- Difference between Splunk Enterprise and Splunk Enterprise Security

## **Module 2**

### **Splunk Deployment Practical Lab**

- Splunk Enterprise Practical Lab Environment
- Splunk Enterprise Security Practical Lab Environment
- Integration Of Various devices with Splunk such as Windows, Unix, Firewall Syslog

## **Module 3**

### **Introduction to Splunk's User Interface**

- Customizing your user settings
- Learn basic navigation in Splunk
- Understanding various components of Splunk
- Various deployment Architecture of Splunk
- Installation of Splunk Enterprise and Search head
- Installation Of Splunk Universal Forwarders

## **Module 4**

### **Introduction to Splunk Basic Configurations**

- Introduction to Splunk Configuration files
- Introduction to Splunk Universal Forwarder
- Introduction to Splunk Forwarder management
- Introduction to Splunk Data management
- Introduction to Splunk Troubleshooting and monitoring
- Understanding various parameter of universal forwarders

## Module 5

### Introduction to Splunk Indexes

- Understanding the Splunk Indexes
- Default Splunk Indexes
- Segregation the Splunk Indexes
- Learning about Splunk bucket and Bucket Classification
- estimating index storage
- Creating a new index

## Module 6

### Basic Searching in Splunk

- Writing Splunk query for search
- Learn Write basic search queries
- Use autocomplete to help build a search
- Identify the contents of search results
- Set time range of a search, refine search, working with events
- Identifying the contents of search and controlling a search job

## Module 7

### Using Fields in Searches

- What is a Field
- Use Fields in search
- Deploying Fields Sidebar
- Field Extractor for REGEX field extraction
- Delimiting Field Extraction using FX

## Module 8

### Saving and Scheduling Searches

- Writing query for search, sharing, saving, scheduling & exporting search results
- Schedule a search, save a search result and share and export a search result

## Module 9

### Creating Scheduled Reports and Alerts

- Describe scheduled reports
- Configure scheduled reports
- Describe alerts
- Create alerts
- View fired alert

## Module 10

### Tags and Event Types

- Introduction to Tags in Splunk
- Deploying Tags for Splunk search
- Understanding event types
- Generate and implement event types in the search

## Module 11

### Creating and Using Macros

- What is a Macro
- What are variables
- Arguments in Macros

## Module 12

### Workflow

- Creating get, post and search workflow actions

## Module 13

### Splunk Search Commands

- Review basic search commands and general search practices
- Steps to create a search pipeline
- Search index specification
- Examine the search pipeline
- Specify indexes in searches
- Use autocomplete and syntax highlighting
- Deploying various search commands like sort, fields, tables, rename, rex, erex

## **Module 14**    **Using Basic Transforming Commands**

- The top command
- The rare command
- The stats command

## **Module 15**    **Correlating Events**

- How to search the transactions
- Creating reports on transactions
- Grouping events using time and fields and comparing transactions with stats

## **Module 16**    **Creating Reports and Dashboards**

- Save a search as a report and Edit reports
- Create reports that include visualizations such as charts and tables
- Create a dashboard
- Add a report to a dashboard
- Edit a dashboard

## **Module 17**    **Datasets and the Common Information Model**

- Naming conventions
- What are datasets?
- What is the Common Information Model (CMI)?

## **Module 18**    **Creating and Using Lookups**

- Describe lookups
- Create a lookup file and create a lookup definition
- Configure an automatic lookup

## **Module 19**

### **Using Pivot**

- Describe Pivot
- Understand the relationship between data models and pivot
- Select a data model object
- Create a pivot report
- Create an instant pivot from a search
- Add a pivot report to a dashboard

## **Module 20**

### **Getting started with Splunk Enterprise Security**

- Understanding the fundamentals of Splunk security
- Details of the traditional security threats
- Details of the modern security threats
- Describing correlation searches and security data model

## **Module 21**

### **Investigation and Monitoring**

- How to monitor the dashboard and brief on each panel
- Investigating notable events with incident review dashboards
- Workflow investigation and relative action on identified flow

## **Module 22**

### **Investigations**

- Deploying ES investigation timelines for managing
- Visualizing and coordinating incident investigations and using journals and timelines for documenting breach analysis and efforts needed to mitigate the issues

## **Module 23**

### **Risk and Network Analysis**

- Deploying risk analysis and identification
- Risk dashboard utilization; how to manage the risk scores for objects and users

## **Module 24**

### **Web Intelligence**

- Using HTTP category analysis
- HTTP user agent analysis
- Analyzing new domain
- Analyzing traffic size for spotting new threats and highlighting investigable events.

## **Module 25**

### **User Intelligence**

- Accessing the anomaly dashboards for the user role and access logs and understanding the identity and asset concepts.

## **Module 26**

### **Threat Intelligence**

- Monitoring the malicious sites with threat activity dashboard and inspecting threat intelligence content with threat artifact dashboard.

## ABOUT US

SIEM Intelligence™ (Leading Blue Team and SIEM Training Providing Company) offers a wide range of courses & training in Information/Cyber Security. We are a Fast-growing online information security training company.

We deal in various kinds of Security Information and Event Management (SIEM) / Security Operations Center (SOC) Trainings. We are a team of highly skilled infosec instructors holding wide range of accreditation in various cyber security domains.

SIEM Intelligence™ is one of the most trusted and reliable training providers in information/cybersecurity, providing exceptional unmatched Hands-on practical training to individuals and corporates worldwide. Our goal is to train, mentor, and support your career in cybersecurity.
